Pair-star target: the first plateau follows the spectral-shortcut order, not the route depth
PS: plateau after learning 000000 first
(16 of 40 seeds take this path)
training (median, quartiles)
Theorem 3.2 (order 4, spectral shortcut): sigma^-2
route depth 5: sigma^-3
plateau duration (gradient-flow time)
initialization scale sigma
PS: learning 000000 after the pair 110001, 110010
training (median, quartiles)
route depth 5: sigma^-3
origin escape K = 6: sigma^-4
plateau duration (gradient-flow time)
initialization scale sigma
