Per-seed duration exponents sit on the route-depth prediction c - 2
fitted exponent per seed
(duration ~ sigma^-exponent, sigma in [1e-5, 1e-3])
predicted exponent c - 2
route depth c = 3 (518 seed fits)
route depth c = 4 (313 seed fits)
route depth c = 5 (93 seed fits)
route depth c = 6 (53 seed fits)
route depth c = 7 (152 seed fits)
prediction: exponent = c - 2
