Static saddle order: inside M* it equals the route depth c*_J in every cell;
in the full space it drops below c*_J exactly where Thm 9.2 predicts a spectral shortcut
route depth c*_J (Thm 8.4)
measured inside M*
measured in the full space
Thm 9.2 formula (family cells)
static-only Thm 9.2 family
saddle order
(power of the first loss decrease)
