Plateau durations follow the route-depth law sigma^-(c-2) (log law for c = 2)
plateau duration (gradient-flow time)
B8: after 00000000, 00001101, 10000001
learn 10000100 (route depth c = 2)
training (median, quartiles)
reference flow on M*
prediction: log(1/sigma)/(s A)
initialization scale sigma
B8: after 00000000
learn 00001101 (route depth c = 3)
training (median, quartiles)
reference flow on M*
prediction: sigma^-1
initialization scale sigma
B8: after 00000000, 00001101
learn 10000001 (route depth c = 4)
training (median, quartiles)
reference flow on M*
prediction: sigma^-2
initialization scale sigma
PS: after 110001, 110010
learn 000000 (route depth c = 5)
training (median, quartiles)
reference flow on M*
prediction: sigma^-3
initialization scale sigma
