"Depth = cores that change" holds for pattern targets and random TTNs on the binary tree only
70% = 'holds' threshold
Pattern control, binary8 (n = 90)
Pattern control, mps6 (n = 81)
CP, overlap 0.3, binary8 (n = 55)
CP, overlap 0.3, mps6 (n = 60)
CP, overlap 0.6, binary8 (n = 77)
CP, overlap 0.6, mps6 (n = 45)
Random TTN, binary8 (n = 71)
Random TTN, mps6 (n = 64)
0.0
0.2
0.4
0.6
0.8
1.0
fraction of series (seed x event) that agree with the picture
growth-law depth within 0.3 of the cores that change
duration exponent within 0.3 of (cores that change - 2)
duration exponent within 0.3 of (growth-law depth - 2)
