Outside pattern targets the growth-law depth stays near 2 (chain) or 3 (binary tree), however many cores change
Pattern target
(control, inside the theory)
Random CP teacher,
overlap 0.3
Random CP teacher,
overlap 0.6
Random TTN teacher
effective depth from the growth law
cores that change at the event
(k_region)
chain (MPS) tree
binary tree
prediction: depth = cores that change
