On targets that break the star condition, training stalls at points that contain a string outside the target (dashed)
R3 (mps3, sigma = 10^-2):
the recombinant 101 appears and stays for a long plateau
amplitude / its target weight
time after the first escape (gradient-flow time units)
000 (weight 1)
100 (weight 0.6)
001 (weight 0.4)
101: not in the target (|amplitude|)
NC_ht4 (ht4, sigma = 10^-2):
plateaus 2 and 3 carry 0010 / 0011
0000 (weight 1)
1100 (weight 0.6)
1110 (weight 0.35)
1111 (weight 0.2)
0010: not in the target (|amplitude|)
TD_binary8 (binary8, sigma = 10^-2):
both edits learned at once, with their recombinant
00000000 (weight 1)
11000000 (weight 0.6)
00001100 (weight 0.35)
11001100: not in the target (|amplitude|)
×10^7
CTL1_mps6 (mps6, sigma = 10^-2):
star control: only partial targets (log time)
010101 (weight 1)
100011 (weight 0.85)
100100 (weight 0.76)
time after the first escape (gradient-flow time units, log scale)
