Outside pattern targets the growth-law depth stays near 2 (chain) or 3 (binary tree), however many cores change
Pattern target
(control, inside the theory)
Random CP teacher,
overlap 0.3
Random CP teacher,
overlap 0.6
Random TTN teacher
MNIST 3 vs 5
(16 pixels)
effective depth from the growth law
cores that change at the event
(k_region)
chain (MPS) tree
binary tree
prediction: depth = cores that change
